Jamie Cooper
Associate Professor, Pennsylvania State University
Architecture Building Auditorium
Wednesday, October 28, 5:00 PM

Jamie Cooper’s research focuses on Michelangelo’s architecture, especially his use of drawing and precedent in his design process. Other research interests include ancient Roman architecture and urbanism, the architecture/urbanism of fin-de-siecle Vienna, and the late North American works of Mies van der Rohe.

Cooper’s interests, education, experience, and skills in architectural design, drawing, and history/theory are inextricably linked, and have led him to develop a unique methodology and philosophy for both his research and teaching. He approaches architectural history from the combined perspectives of an experienced designer and architectural historian, and uses analytical drawing, sketching, diagraming, as well as computer modeling as primary investigative tools.
